

Predictive Enrolment Analytics

FORECAST ENROLMENT AND VISUALIZE THE GEOGRAPHIC CONTEXT OF YOUR DATA

If you have accurate enrolment projections, you can create more precise budgets and more effectively allocate resources. PowerSchool Predictive Enrolment Analytics, part of the Analytics & Insights platform, is a data-driven decision-making analytics platform that gives district leaders a view into what changes need to take place based on fluctuating enrolment numbers. With insights into your enrolment trends, you can make data-driven decisions in the best interests of your students, schools, district, and community.

Understand Enrolment Trends

Plan for the future by viewing past, present, and projected student enrolment. Since this is an annual process, you can ensure you are working with the most current data for more accurate planning.

Make Data-Driven Decisions

Use established enrolment data and trends to guide and justify your decisions to ensure the best interests for your students, schools, district, and community are met.

Ensure Proper Resource Allocation

Know how many students will attend your district and individual school locations to better plan for resources like staffing, budgeting, and transportation.

Analyze Your Data Geographically

View your student data on a map that shows the relationship between students' homes, community programs, and schools.

“PowerSchool’s Predictive Enrolment Analytics tool was crucial in helping us look at all the right data and make the most informed decision when we were analyzing student enrollment decline within the district.”
